

# MAKE WAR

Compete against your friends!  
Unleash powerful spatial articulation beams!  
Alter time and space to vanquish your foes!

Make War is a multiplayer arena battle game for iOS, Android, and other mobile platforms, that pits out the best of the best in community built levels. The main battling mechanics use multitouch gestures that manipulate multi-jointed "space articulation beams". These beams are anchored by one of the user's thumbs and pulled in any direction by the other thumb, but are limited to an upgradeable number of joints. If these beams touch another player, the user gains a kill and some experience points for upgrading their powers. Besides the spatial articulation beams, users will gain powers such as short-distance teleportation, temporal beam grenades, temporary full-body camouflage, and much, much more.

Make War will support up to 16 players per arena battle with its target audience being male and female mobile gamers aged 13+. Make War contains animated blood, comic mischief, and violence, thus the projected ESRB rating will be T for teen. Make War will support iOS, Android, Windows, and internet browser playability.
